

INFORMATION

OILAID-EM-15

FRACTURING FLUID EMULSIFIER

DESCRIPTION

OILAID-EM-15 is a cationic surfactant designed specially for use as a fracturing fluid emulsifier. OILAID-EM-15 prepares stabilized oil-in-water emulsions which have exhibited excellent temperature stability up to 250° F (121° C). Its typical properties are:

Specific Gravity @ 60° F (15.5° C) 0.850
Flash Point 65° F
Pour Point -40° F
Color Pale Yellow

APPLICATION

OILAID-EM-15 produces an emulsion with condensate, diesel, or light oils used in hydraulic fracturing stimulations.

These viscous emulsions exhibit excellent proppant transport characteristics and are capable of carrying high concentrations of large proppants for long, wide fractures.

RECOMMENDED TREATMENT

OILAID-EM-15 is used in concentrations of 0.1% to 2.0% by volume.

HANDLING

Goggles should be worn when handling this product. Prolonged exposure may cause skin irritation. In case of contact with the eyes, flush with water for 15 minutes and contact a physician.

PACKAGING

OILAID-EM-15 is shipped in 55 gal steel drums.
