

INFORMATION

STUCKBREAKER

PIPE FREEING COMPOUND

DESCRIPTION

STUCKBREAKER is a concentrated organic oil soluble surfactant blend, to be used in the preparation of a spotting fluid for freeing differentially stuck pipe. This highly effective soak solution has been proven in numerous field applications to significantly aid in freeing stuck pipe.

APPLICATION

STUCKBREAKER when mixed with diesel or crude oil and placed in the zone of stuck pipe, penetrates the cake between the wall and the pipe, releases the differential pressure lock, and provides a lubrication medium that enables the pipe to be pulled free.

RECOMMENDED TREATMENT

Approximately 1 gal of STUCKBREAKER should be added to each bbl of diesel or crude oil.

The volume of the final mixture should be sufficient to cover the zone of stuck pipe. The slug should be spotted over the zone and attempts made to rotate and pull the pipe free. If a weighted spotting fluid is required, use STUCKBREAKER-W or OILSPOT.

PACKAGING

STUCKBREAKER is normally packaged in 55 (US) gal/208.2 litre export quality steel drums.

Prices and delivery schedules are available from any Messina office or area representative or distributor.
