

INFORMATION

KLEEN-THIN

LOW-TOXICITY OILMUD THINNER

DESCRIPTION

KLEEN-THIN is a very effective dispersant for low-toxicity and conventional oil muds containing organophilic clay.

It is a unique, proprietary blend of specially developed organic compounds in liquid form.

APPLICATION

KLEEN-THIN may be used to reduce excessive viscosities developed in any organoclay containing oil mud as a result of contamination, high temperatures, or over-treatment with organoclay. These fluids are effectively thinned without significant reduction in fluid density.

RECOMMENDED TREATMENT

KLEEN-THIN is extremely effective and pilot testing should be performed to determine the optimum treatment level for a given fluid. Treatment levels are generally within the range of 0.5 to 2.0 ppb (1.5 to 6 kg/m³).

PACKAGING

KLEEN-THIN is available in 5 gal/19 litre pails containing 42 lb (19 kg) of product, and in 55 gal/208 litre export quality steel drums containing approximately 465 lb (210 kg).
