

INFORMATION

FOAMFREE-A

DEFOAMER

DESCRIPTION

FOAMFREE-A is an alcohol-base formulation that is highly effective in removing entrained gas or air from all water-base mud systems. FOAMFREE-A is a clear, colorless liquid containing 98% active contents.

FOAMFREE-A is insoluble in water, but is dispersible. The product contains an emulsifier that aids in its effectiveness to spread along the aqueous film dividing the bubbles in the foam, thereby causing the bubbles to coalesce and collapse. FOAMFREE-A is stable in drilling fluids up to a temperature of 150° F. It is non-toxic. The odor of FOAMFREE-A is due to the hydrocarbon and traces of carbonyl impurities normally associated with alcohols of this type.

APPLICATION

Whenever foaming is a problem.

RECOMMENDED TREATMENT

A typical treatment of FOAMFREE-A to a system containing foam is 1 gal per 50 bbl of fluid. Higher treatment levels are required where foaming persists.

MISCELLANEOUS

Prices and delivery schedules can be obtained from any Messina office, area representative, or local distributor.

PACKAGING

FOAMFREE-A is packaged in either 5 or 55 (US) gal (18.9 or 208.2 litre) drums.
