

INFORMATION

MUD-MUL

EMULSIFIER

DESCRIPTION

MUD-MUL is a concentrated, high molecular weight, liquid formulation designed and proven to be an excellent emulsifier for fresh and brackish water-base drilling fluid systems.

APPLICATION

MUD-MUL emulsifies oil into drilling muds, up to 25% by volume. MUD-MUL is effective with diesel, mineral oil, or crude oil. MUD-MUL also improves mud flow properties and improves oil-wetting of drill pipe, for reduction of torque and drag.

RECOMMENDED TREATMENT

0.2 to 1.0 gal of MUD-MUL per bbl of mud is suggested. The ultimate treatment depends upon the mud type and required performance. A Messina Technical Service Representative can provide specific recommendations.

MISCELLANEOUS

Prices and delivery schedules are available from any Messina office, local agent or distributor.

PACKAGING

In 55-gal/208.2 litre steel drums. Smaller drums are available on request.
