

INFORMATION

MUDDET

DETERGENT/SURFACTANT

DESCRIPTION

MUDDET is a concentrated liquid blend of selected surface-active agents. The product has application in all water base drilling fluid systems.

APPLICATION

MUDDET aids the wetting of drilled solids, thereby reducing the surface tension and promoting the settling of the solids in the mud pit. This same surface reaction also reduces the balling of shale cuttings resulting in an increase in the penetration rate. As an emulsifier, MUDDET lowers torque and drag.

RECOMMENDED TREATMENT

It is recommended that MUDDET be used in concentrations of 0.02 to 0.04 gal per bbl (0.5 to 0.9 L/m³) of mud, depending upon the properties required.

MISCELLANEOUS

Prices and delivery schedules can be obtained from any Messina office or area representative or local distributor.

PACKAGING

MUDDET is normally packaged in 55 (US) gal/208.2 litre export quality steel drums. Smaller drums are available on request.

MUDDET is a Messina trademark
