

INFORMATION

MESUCO-BAR

API BARITE

DESCRIPTION

MESUCO-BAR is barium sulfate (barite) powder. It is an inert material which fully conforms to either API Standard 13A and/or OCMA Specification DFCP-3.

APPLICATION

MESUCO-BAR is used for the weighting of any water, oil or invert drilling fluid system.

RECOMMENDED TREATMENT

MESUCO-BAR is a very pure grade barite and thus is inert and will not cause any abnormal viscosity increase or other change in the rheological properties of the mud. The product is readily dispersible, requiring no special care when mixing into the fluid system.

MISCELLANEOUS

Quality reports are issued with each shipment of MESUCO-BAR.

Prices and delivery schedules are available from any Messina office, local agent or distributor.

PACKAGING

MESUCO-BAR is normally packaged in 100 lb export paper bags from Messina's United States plants and, for the Eastern Hemisphere production, 50 kg bags are normally supplied. However, 25 kg bags are also available.

MESUCO-BAR is a Messina trademark
